WHALE TAIL HANDLES**

# V3 SERIES

## MIDNIGHT & MIDNIGHT MINI

### WHALE TAIL HANDLES

## WHY THE MIDNIGHT V3?

Selectlok's Midnight V3 & Midnight V3 MINI whale tail handles have taken the industry by storm! Based on a tried-and-tested platform, they have proven their metal in the harshest Australian conditions.

Both the mini and full-sized options share the same great features that set the V3 Series apart from the competition and position them as some of the best whale tails on the Australian market. The MINI V3 is positioned as the little brother to the standard, full-sized Midnight V3. This compact yet stylish unit is approximately 30% smaller than a traditional whale tail and is better suited to slide-out drawers and underbody toolboxes.

Featuring a stainless-steel camshaft and the choice of high-security Euro profile or automotive key barrels, both size variants utilise the same central locking kits. This is the ultimate set-and-forget whale tail for your build or project.

### UNIQUELY SELECTLOK

The Midnight V3 series use a uniquely designed locking cam.

### SET AND FORGET

An adjustable roller cam allows you to set your grip between 20–55mm, and a specially designed supporting bracket for the camshaft ensures that less in-situ adjustment or fine-tuning is required.

### MADE TO MATCH

Both Midnight V3 and MINI V3 are available in either a Black, EDP or Polished Chrome finish.

### ANY WAY YOU CUT IT

Both the Midnight and MINI V3 can be keyed alike in your choice of either Automotive Key Barrel or Half-Euro Profile Cylinder. All versions feature a Pad-Lockable Hasp, providing twice the security.

### DURABLE & PROTECTED

Made from a high quality zinc die-cast, and featuring a stainless-steel shaft means the V3 is built tough. Whilst a neoprene gasket and rubber seals keep water out to provide IP65 protection.

## LOCK REMOTELY

The Midnight V3 series utilises a Central Locking Kit that is suited to all variants and sizes within the range. It is available in both 12V and 24V, as well as right-sided or left-sided orientation. The AMP draw on the actuator units is 4–4.5 amps per load. Selectlok recommends no more than 3 units per 40-amp relay.

## ME & MINI ME

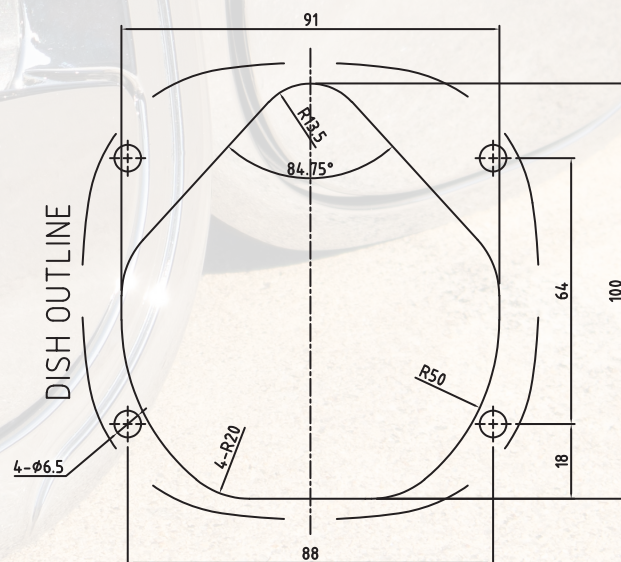

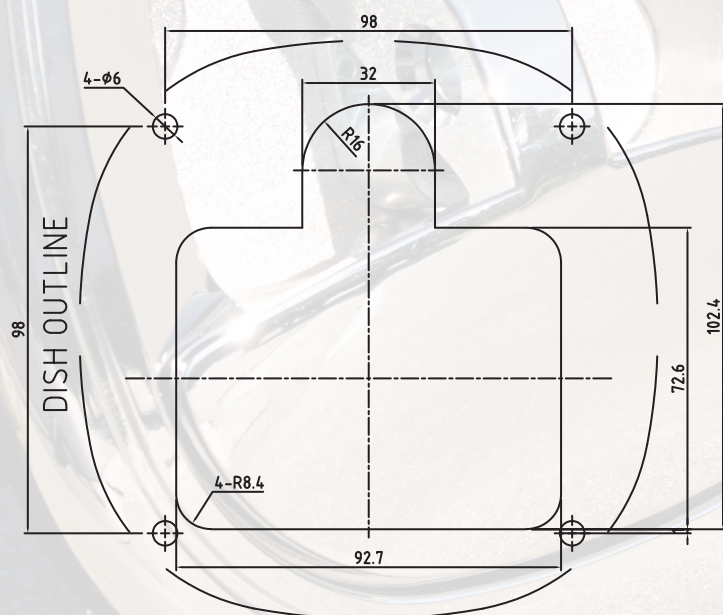

The MINI version is approximately 30% smaller than the full-sized Midnight V3.

## FORM AND FUNCTION

Designed to support multi-point locking systems, and with a wide range of available features and options, the Midnight V3 and Midnight MINI V3 series of whale tail folding handles offer an innovative new take on the traditional 'whale tail' design. These handles have taken the country by storm! Specifically designed in Australia for Australian conditions!
